

Amy R. Bejtlich
Manager, Engineering and Development
AWS Threat Intelligence Group
amybej@amazon.com

To Whom It May Concern,

I am Amy Bejtlich, the Manager of the AWS Threat Intelligence Group's (ATIG) Engineering and Development team. I previously served in leadership roles at an industrial control systems (ICS) cybersecurity startup, a financial institution, and a Fortune 15 global telecommunications company. Prior to that, I served at the Federal Bureau of Investigation (FBI) Headquarters Counterterrorism Division, and as an Intelligence Officer with the United States Air Force.

I am pleased to write a letter of recommendation on behalf of Cassie Wischhoefer. Cassie was part of my team as a Systems Development Engineer Intern from 2022-06-18 until 2022-08-29. Based on the technical competencies and leadership characteristics I observed from Cassie during her internship, I am happy to provide her with an unqualified endorsement.

Cassie's intern project, the development of a Huntrule Tracking System, provided ATIG analysts a valuable resource that supports high priority cyber espionage and cyber-criminal investigations. In addition to her technical contributions, Cassie's communication and proactive approach was widely praised by ATIG analysts.

"Cassie has done an amazing job- all the cyber espionage members think she's done well!"
-An ATIG Espionage analyst

"We all thought Cassie did a great job on her presentation."
-Eric Strom, ATIG Sr. Manager

"Very impressive."
-Cassie's Mentor, a Senior Security Engineer

Cassie consistently demonstrated strength in Amazon's Leadership Principle Learn and Be Curious. She was able to find information and overcome obstacles independently. She did an outstanding job being given a vague problem and producing results. She also went beyond her project to learn about machine learning and malware analysis.

For these reasons, I give Cassie my unqualified recommendation as a Systems Development Engineer. Please do not hesitate to contact me with any questions or concerns.

Sincerely,

Manager, Engineering and Development
AWS Threat Intelligence Group (ATIG)
